Polyamide Cages & Precision Plastic Parts

- **Abrasion Resistance or Scraped Spot Obstruction:** Polyamide is exceptionally impervious to the scraped area and wear. This quality makes it outstandingly strong in high-contact zones.
- **Chemical Resistance:** Cast polyamides offer powerful protection from synthetics, so they give better security than wires and links in harsh conditions.
- **Corrosion Resistance:** Polyamide gives successful corrosion against caustic materials.
- **Electromagnetic Obstruction**
- **Flexibility and Adaptability:** Polyamides were explicitly produced for excellent adaptability. This adaptability makes polyamide items advantageous to move, curve and fit into squeezed spaces.
